New OKW Product Documentation 2011

The special NEW PRODUCTS supplement 2011 is an addition to the existing plastic case catalogue 2010/2011. All enhancements to the product groups have been integrated.

The list starts off with the multifunctional INTERFACE TERMINAL series, which has been supplemented with raised bottom parts for larger installations as well as a flush wall suspension element for flat wall mounted applications. Optimum use can be made of modern control centres in the two new sizes XS and L in the DIATEC product range. The MINITEC E mobile case range contains two further case heights for more installation volume, an intermediate ring without eyelets and a variety of accessories. A completely new addition to the portfolio is the robust WALLTEC range of wall mounted cases with freely accessible terminal compartments for easy mounting and wiring. The cases are suitable for outdoor and indoor use, e.g. for use in heating, air conditioning and ventilation technology, measuring and control engineering, for machine and industrial controllers.

The NEW PRODUCTS supplement for 2011 also contains useful information about the comprehensive OKW services in the form of customer-specific modifications of standard products, special customer designs as well as innovative processes and materials, for example the new biomaterial and an antimicrobial plastic as protection against bacteria, viruses and fungi.
