

## SPECIAL MATERIAL

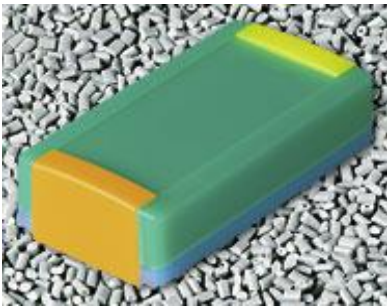

## SERVICES

In general we manufacture our product range with the injection moulding process in specific standard materials. They are available ex warehouse. In case of special properties of the parts like chemical resistance, flame-resistance or colouring, we also manufacture our product range in different materials and colours from one piece – depends on the type.

New: production of parts from antimicrobial ASA material or from BIOGRADE materials!

We would be delighted to advise you on our most favourable, technological approaches.

## DESIGN EXAMPLES

## MATERIALS

We can offer the following materials for selection for a special version:

**1. Special colours**

Link for material specifications: <http://www2.okw.com/eCode/73>

**2. Flame-resistant materials**

Link for material specifications: <http://www2.okw.com/eCode/76>

**3. Biograde®**

Link for material specifications: <http://www2.okw.com/eCode/75>

**4. Antimicrobial material**

Link for datasheet [http://www.okw.com/okw-static/productOption-pdf/OKW\\_antimicrobial.pdf](http://www.okw.com/okw-static/productOption-pdf/OKW_antimicrobial.pdf)

## QUALITY

Similar to standard - surface quality can deviate due to colour or material related conditions.

## TOLERANCES

Due to different shrinkage of the materials and other setting parameters, dimensions and shapes can change compared to standard parts. Also there are colour differences Delta E 2.5 from each batch production possible.

## DELIVERY TIME

Approx. 25 working days resp. according quotation.

## FIXED COSTS / MINIMUM ORDER QUANTITY

According quotation.

## FORM OF DELIVERY

Same as standard (in PE-bags, in layers in the cartons).  
Special agreements possible.

Quantity differencies + 10 % possible.
