

LACQUERING

The colours can be produced in our own mixing unit according to RAL Classic. This guarantees consistent high quality and short delivery times. The metallic colour RAL 9006 (white aluminium) can be applied as standard. Other metallic colours, as well as Pantone colours (see Form Guide), are available upon request.

- **Lacquers in different degrees of lustre**
According to your needs, from matt to glossy. Matt lacquers prevent undesirable light reflections, and glossy lacquers offer a refined, modern look.
- **Metallic lacquer and colour tones**
Finishes in a metallic look.
- **Soft-Touch**
Lacquer like artificial leather to improve the feel of your product. Soft-Touch lacquer gives your products a feel as soft as velvet, ensuring pleasantly reliable operation of handheld instruments, for example. NEW: transparent Soft-Touch lacquer.
- **ESD conductive lacquer**
Special lacquer in black-grey to prevent electrostatic discharges.

We will be pleased to advise you on the technical options available.
